

W2-S2 PRACTICE

HTML ELEMENTS

 *At the end of this practice, you should be able to...*

- ✓ Manipulate **Image, Tables, Lists, paragraphs, headings and hyperlinks**

 *How to work?*

- ✓ Download **thestart code** from the LMS
- ✓ Open the folder in VS Code

 *How to submit?*

Submit via telegram drop your github repo link onto our group
eg :<https://github.com/YOUR-USERNAME/repository-name.git>

 *Are you lost?*

You can read the following documentation to be ready for this practice:

- ✓ [WC3 School - Links](#)
- ✓ [WC3 School -Tables](#)
- ✓ [WC3 School – Bloc and inline elements](#)
- ✓ [WC3 School -Tables](#)

EXERCISE 1 - A Blog Post

For this exercise, you need to create a simple blog post with the following structure:

- A <h1> for the title of the blog post (e.g., "My First Blog Post")
- Two paragraphs of text using the <p> tag, discussing any topic of your choice
- A hyperlink to an external website (e.g., [link to a Wikipedia article related to your blog topic](#))
- A <h2> tag for a subheading (e.g., "Conclusion")
- A final paragraph summarizing your blog post.
- Center .blog-card using margin: 0 auto;, set a width: 450px, and add padding and borders.
- Style links with text-decoration: none; and add an :hover effect.

You can find below an example of post (*just an example*):

How to make a text bold?

Link to an external website

Introduction to HTML !

Welcome to the world of code!

Last year, millions of learners from our community started with HTML.

Why?

HTML is the skeleton of all web pages. It's often the first language learned by developers, marketers, and designers and is core to front-end development work

HTML provides structure to the content appearing on a website, such as [images](#), text, or [videos](#).

Conclusion

Still have questions? Please [contact me](#) for any questions !

EXERCISE 2 – Relative paths

Here is a website folder structure.

YOU JOB: Fill the table with the **missing hyperlinks**, so that we **can create a link** from the source page to the destination page.

SOURCE PAGE	DESTINATION PAGE	HYPERLINK
action.html	cinema.html	<code></code>
home.html	songs.html	
help.html	action.html	
cinema.html	help.html	
action.html	home.html	
cinema.html	action.html	
songs.html	action.html	
action.html	songs.html	

EXERCISE 3 – A Small Website

For this exercise, you need to build a small website with 4 pages and a **menu**

- Home
- About us
- Our Services
- Contact

We should be able to navigate **from any page to the other pages**, using the menu

Each page of your website should contain:

- The menu
- A title
- An image
- A list of items
- A paragraph

Feel free to express your creativity!

GitHub Setup & Weekly Guide

Follow these instructions to submit your homework and grab new exercises every week.

Part 1: Initial Setup (Do This ONCE)

Step 1:

1. Fork the Class Repository i drop
2. Click the Fork button near the top-right corner of the page.
3. Click Create fork to create your own copy of the repository on your GitHub account.

Step 2:

1. Clone Your Fork to Your Computer
2. On your newly created GitHub fork page, click the green Code button and copy the URL (it should look like [https://github.com/YOUR-USERNAME/repository-name.git])
3. Open VS Code (or your terminal).
4. Open a terminal (Ctrl + ~ or Cmd + ~) and navigate to the folder where you want to keep your project.
5. Run the clone command:

`git clone https://github.com/YOUR-USERNAME/repository-name.git`

1. Move into the project folder:

`cd repository-name`

Step 3: Link to the Teacher's Repository

To get weekly updates, you need to tell Git where the original teacher repository is:

`git remote add upstream TEACHER_GITHUB_REPO_URL`

Part 2: Weekly Workflow (Do This EVERY WEEK)

Step 1: Fetch New Exercises from the Teacher

At the start of every week, run this command to pull the new starter code into your local project:

`git pull upstream main`

Step 2: Work on Your Exercises

- Solve the exercises inside VS Code.

Step 3:

Push Your Homework to Your GitHub

When you finish your work and are ready to submit:

- Stage your changes:

`git add .`

- Commit your changes:

`git commit -m "Finish Week X exercises"`

- Push to your GitHub repository:

`git push origin main`

- Copy your GitHub repository URL and submit it to the assignment link!
